	Email	<u>reception@brusselsairport.be</u> (office hours only) <u>airside.inspection@brusselsairport.be</u> (Airside Inspection) <u>inspect@brusselsairport.be</u> (Airside Inspection)			
7	Types of traffic permitted (IFR / VFR)	IFR / VFR			
8	Remarks	NIL			

EBBR AD 2.3 Operational Hours

1	AD Administration	H24
2	Customs and immigration	H24
3	Health and sanitation	H24
4	AIS Briefing Office	H24
5	ATS Reporting Office (ARO)	H24
6	MET Briefing Office	H24
7	ATS	H24
8	Fuelling	H24 (Between 2100 and 0500 (2000 and 0400), only with credit cards acceptable by the chosen petroleum company)
9	Handling	H24
10	Security	H24
11	De-icing	H24
12	Remarks	See also EBBR AD 2.20, <u>§ 1</u> and EBBR AD 2.21, <u>§ 1</u> .

EBBR AD 2.4 Handling Services and Facilities

1	Cargo-handling facilities Modern handling facilities Nearest railway siding: Brussels (10KM)		
2	Fuel types	JET A1	
-	Oil types	All types	
3	Fuelling facilities and capacity	Pits and trucks / No limitations	
4	De-icing facilities By arrangement with handling agent		
5	Hangar space for visiting aircraft	NIL	
6	Repair facilities for visiting aircraft	All repairs	
7	Remarks	General aviation handling is compulsory	

EBBR AD 2.5 Passenger Facilities

1	Hotels	t aerodrome and in the city			
2	Restaurants	At aerodrome and in the city			
3	Transportation	axis, buses, railway station and car hire			
4	Medical facilities	Doctor, recovery rooms and ambulances Hospitals in Brussels (10KM) and in Vilvoorde (5KM)			
5	Bank	At aerodrome			
5	Post office	At aerodrome			
6	Tourist information	At aerodrome			
7	Remarks	NIL			

EBBR AD 2.6 Rescue and Fire Fighting Services

1	Aerodrome category for fire fighting	CAT 10			
2	Rescue equipment	CAT 10 compliant			
3	Capability for removal of disabled aircraft	No dedicated removal equipment on site, contact Airside Inspection (+32 2 753 69 00) or <u>inspect@brusselsairport.be</u>			
4	Remarks	NIL			

EBBR AD 2.7 Seasonal Availability - Clearing

		40 vehicles composed of:			
		sweepers-blowers tractors equipped with sweeper-blower			
1	Types of clearing equipment	sprayers of de-icing liquid			
		snow blowers			
		stand-sweepers spreaders			
		1. runways, appropriate important taxiways and holding bays			
2	Clearance priorities	2. Important aprons and aircraft stands			
		3. remaining part movement area and all roads outside the movement area			
3	Use of material for movement area surface treatment	KFOR (potassium formate fluids) and NAFO (sodium formate solids) used.			
4	Specially prepared winter runways	Not applicable			
		Transmission of information by ATIS, SNOWTAM and RCR based on RCAM.			
		Designated authority to as ardinate information on the surrent state of progress of anow			
F	Bemerke	clearance operations and the condition of the movement area is the Airside Inspection:			
5	Remarks	clearance operations and the condition of the movement area is the Airside Inspection: TEL: +32 (0) 2 753 69 00			
5	Remarks	clearance operations and the condition of the movement area is the Airside Inspection: TEL: +32 (0) 2 753 69 00 FAX: +32 (0) 2 753 69 09			

EBBR AD 2.8 Aprons, Taxiways and Check Locations Data

	Apron surface	CONC		
1	Apron strength	Apron 1 north: PCN 72/R/A/W/T Apron 1 south, 2 north and 2 south: PCN 77/R/A/W/T Apron 3 north: PCN 68/R/C/W/T Apron 3 south: PCN 110/R/B/W/T Apron 4: PCN 63/R/D/W/T Apron 9: PCN 117/R/B/W/T Apron 10: PCN 75/R/B/W/T Apron 40: PCN 68/R/C/W/T Apron 51b: PCN 70/R/C/W/U Apron 51b: PCN 70/R/C/W/U Apron 51: PCN 70/R/C/W/U Apron 53: PCN 76/R/C/W/T Apron 54: PCN 73/R/B/W/T (entry S and entry W: PCN 80/F/A/W/T) Apron 55: PCN 43/R/C/W/T Apron 56: PCN 76/F/A/W/T Apron 60: PCN 120/R/B/W/T		
	Taxiway width	See chart <u>AD2 EBBR-GMC.02</u>		
2	Taxiway surface	CONC / ASPH		
	Taxiway strength	See chart <u>AD2 EBBR-GMC.02</u>		
3	ACL and elevation	On satellite and parking areas (mean elevation 175FT)		
4	VOR check points	NIL		
-	INS check points	See chart AD2 EBBR-APDC.01 and AD2 EBBR-APDC.02		
5	Remarks	Slopes on aircraft stands: stand 305 1.50%, stand 306 1.60%.		

EBBR AD 2.9 Surface Movement Guidance and Control System and Markings

	Aircraft stand identification signs	AVBL			
1	Taxiway guide lines	AVBL			
	Visual docking/parking guidance system at aircraft stands	Parking guidance lines are available at all stands. For docking guidance system, see EBBR AD 2.20, § 3.1.			
	Runway markings	Designation, threshold, touchdown zone, centre line and edge lines, aiming point			
2	Taxiway markings	Centre line, edge lines and holding positions (CAT I and CAT II/III operations) at the TWY/ RWY intersections. Intermediate holding positions are available (not lighted).			
3	Stop bars	AVBL (see chart <u>AD2 EBBR GMC.01</u>)			
		Line-up position signs at RWY 07R:			
4	Remarks	 sign "PSN 1" (line-up position 1) on the left beyond the PAPI at 461.4M from THR 07R sign "PSN 2" (line-up position 2) on the left at 743.7M from THR 07R (BTN TWY C6 and C5) sign "PSN H" (line-up position heavy) on the left at 194 m from THR 07R 			

EBBR AD 2.10 Aerodrome Obstacles

No Area 2 or Area 3 obstacle data sets are currently provided for EBBR.

Details on EBBR aerodrome obstacles can be found on the aerodrome obstacle charts (see EBBR AD 2.24).

Note 1: Pilots shall draw attention to the presence of an obstacle of 84M AMSL (46M aboveTHR 07L) in the axis of RWY 07L/25R and at 1610M from THR 07L. This obstacle (church with ICAO day and night marking installed) protrudes 17M above the approach surface of RWY 07L and the take-off climb surface of RWY 25R.

Note 2: Pilots shall draw attention to the presence of the control tower building (107.2 M AMSL) between THR 25R and THR 25L.

EBBR AD 2.11 Meteorological Information Provided

1	Associated MET Office	EBBR MET			
•	Hours of service	H24			
2	MET Office outside hours	NIL			
	Office responsible for TAF preparation	EBBR

In order to reduce the taxi procedure, ATC may, with a visibility of 2KM or more and subject to pilot's acceptance, authorize take-off from one of the intersections below. Pilots unable to accept should advise ATC duly in advance.

To expedite departing traffic when RWY 01 is in use, departure on RWY 07R from position "H", line-up position 1 or line-up position 2 will be assigned by ATC.

Intersection TORA are measured from the point of contact of taxiway centre line marking and runway centre line.

EBBR AD 2.16 Helicopter Landing Area

	Coordinates of TLOF and FATO	505348.28N 0042758.57E
1	THR	The FATO is located on TWY R1
2	TLOF / FATO elevation	115FT
	TLOF dimensions	22M x 22M
3	TLOF surface	ASPH
	TLOF strength	PCN 75/F/C/W/T
4	FATO true bearing	065° / 245°
5	Declared distances available	Information not available. See remarks on the restrictions of use.
6	TLOF and FATO marking	Marked with a conventional H (dimensions 6M x 3.6M). There is no aiming point provided, a WDI is located on the west side.
7	Approach and FATO lighting	Information not available. See remarks.
		State and military flights are exempted.
		Performance class 1 operations are not allowed to/from the FATO due to the slope of obstacle limitation surfaces that comply to performance class 2 and 3 only.
		The maximum allowed D-value on the EBBR FATO is 14.6 M.
8	Remarks	The take-off and climb surface has been protected with a slope of 8% for the first 245 M and 16% for the next 830 M to the east and west of the FATO for performance class 3 helicopter operations. The take-off and climb surface has been protected with a slope of 12.5% for 1220 M to the east and west of the FATO for performance class 2 helicopter operations.
		Caution must be exercised when operating to and from the FATO due to possible moving aircraft and vehicles.
		The FATO shall be vacated immediately after landing according ATC instructions.
		Helicopters with skid-type landing gear proceeding to and from the FATO shall hover taxi to and from the parking area.
		Helicopters with wheel-type landing gear proceeding to and from the FATO shall ground taxi to and from the parking area.
st		

EBBR AD 2.17 ATS Airspace

	Designation	Brussels CTR
1	Lateral limits	504434N 0043404E - an arc of circle, 10NM radius, centred on 505405N 0042904E and traced clockwise to 505203N 0044435E - 504434N 0043404E.
2	Vertical limits	1500FT AMSL

EBBR AD 2.20 Local Aerodrome Regulations

1 GENERAL

1.1 Airport Coordination

EBBR is a coordinated airport. Unless exempted, and irrespective of noise abatement procedures (EBBR AD 2.21, <u>§ 1</u>), ATFM slot, or traffic rights, take-off or landing of an IFR flight without an appropriate allocated slot is prohibited and punishable. No airport slots will be allocated for take-off during following periods:

- SAT, 0000 (FRI, 2300) to SAT, 0500 (0400);
- SAT, 2300 (2200) to SUN, 0500 (0400);
- SUN, 2300 (2200) to MON, 0500 (0400).

1.1.1 Coordination Procedure

1.1.1.1 General

For every take-off and landing of an IFR flight, a slot shall be requested and obtained from the coordinator before the filing of the flight plan.

Applications should be made as early as possible. In case of short-term applications or alterations to flights, lower priority handling must be expected as against flights with earlier allocated slots for the same time of arrival or departure.

For fully coordinated airports, the arrival and departure times may only be published by the air carrier and/or operator after allocation of the slots by the airport coordinator. The arrival and departure times at coordinated airports included in the announcements and/or applications must conform to the airport slot as allocated by the airport slot coordinator.

Permission for entry and exit granted by the Belgian CAA does not replace the obligation to report or submit an application to the airport coordinator. The same applies to flight schedules for scheduled air services approved by the Belgian CAA.

Any unused slot shall be returned to the airport coordinator in due time.

1.1.1.2 Procedures for airlines

Slot applications shall be submitted via email to <u>BRUACXH@brucoord.org</u>, whereby the procedures and formats of the *IATA Standard Schedule Information Manual* (SSIM, chapter 6), must be used.

1.1.1.3 Procedures for General Business Aviation (GA/BA)

Unless otherwise agreed with Belgium Slot Coordination (BSC), airport slots and airport slot authorization number must be requested only via a handling agent for General and Business Aviation. Slot requests sent directly to the coordinator will not be accepted.

GA/BA flights outbound from or inbound for EBBR falling under this regulation shall fill item 18 of the flight plan form.

The filing format is as follows: RMK/ASL<authorization number>. The authorization number is that given by the coordinator when allocating the airport time slot. It is composed of 14 alphanumeric characters, the first 4 of which are the ICAO code of the airport for which the airport time slot has been delivered (example: "RMK/ASLEBBR1234567890").

If the flight is between two coordinated airports applying a similar regulation (ex. France or Germany), the authorization numbers delivered by the coordinator for each airport shall be filled in, in item 18 as per the format below: RMK/ASLLFMNSEA3456789 RMK/ASLEBBR1234567890

The general or business flight plans falling under this regulation and filed without authorization number or without a corresponding airport slot time, will not be taken in consideration for the departure sequence. For that purpose, a message will be sent by email by Brussels Airport Company on account of Belgium Slot Coordination to the flight plan originator or his dedicated representative.

1.1.2 Exemptions

Following flights are exempted from coordination, but should be reported to the airport coordinator as far in advance as possible:

- flights carrying members of the Belgian Royal Family, the Belgian governments or foreign royal families, foreign heads of state or leaders of governments, the President or commissioners of the European Commission when they are on official mission;
- military missions.

Following flights are exempted from coordination, but should be reported to the airport coordinator as soon as possible after the operation:

- ILS calibration flights when urgently needed for operational reasons;
- missions in case of disaster or medical urgency;
- · police emergency flights;
- · SAR flights;
- landing (and subsequent departure within 2 hours) in case of operational diversion.

1.1.3 Additional Information

Post: Belgium Slot Coordination VZW

Mr Didier Hocq General Manager Brussels Airport PB27 1930 Zaventem 4 BELGIUM

- TEL: +32 (0) 2 753 57 91 to 94
- Email: <u>BRUACXH@brucoord.org</u> (for slot requests; traffic on this email address is monitored and slot requests are replied H24)
- Email: didier.hocq@brucoord.org (for any other question; office hours only)
- URL: <u>www.brucoord.org</u>

Operational hours: MON to FRI (HOL excl), 0700-1600 (0600-1500)

1.2 Use of VHF Radio by Vehicles

Vehicles on the manoeuvring area use VHF radio for communication with Brussels TWR. Vehicles are thus on the same frequency as aircraft on the active runway, enhancing pilot and driver awareness (see also chart <u>AD 2.EBBR-GMC.03</u>).

1.3 Ground Surveillance - Use of Mode S Transponders

EBBR is equipped with an advanced ground surveillance system using Mode S. Operators intending to use the airport should ensure that Mode S transponders are able to operate when their aircraft are on the ground.

Pilots shall select XPDR or the equivalent according to specific installation, AUTO if available, not OFF or STBY, and the assigned Mode A code:

- from the request for push back or taxi, whichever is earlier;
- after landing, continuously until the aircraft is fully parked on stand. When parked, Mode A code 2000 shall be set before selecting OFF or STBY.

Whenever possible, the aircraft identification (i.e. call sign used in flight) shall be entered as from the request for push back or taxi, whichever is earlier (through the FMS or the transponder control panel). Pilots shall use the ICAO format for aircraft identification, as entered in item 7 of the flight plan form (e.g. "DAT123").

To ensure that the performance of systems based on SSR frequencies (incl airborne ACAS units and SSR radars) is not compromised, ACAS shall not be selected before receiving clearance to line up. It should be deselected after vacating the runway.

Belgian CAA

Aircraft taxiing without flight plan, shall select Mode A code 2000.

1.4 Wildlife Strikes

Pilots are requested to report wildlife strikes immediately to ATC and submit the wildlife strike report to:

Safety Management

Email: <u>safetymanagement@brusselsairport.be</u>

Email: <u>bcaa-occurrences@mobilit.fgov.be</u>

2 TAXI REGULATIONS

2.1 General

Pilots are advised to consult chart AD 2.EBBR-GMC.05, depicting the hot spots on the manoeuvring area.

Between 2200 and 0459 (2100 and 0359), taxi restrictions apply (see EBBR AD 2.21, § 1).

2.2 Use of Stopbars

Stopbars at entry points of active RWY are operated permanently. Due to operational requirements and practices, the stopbar at RWY entry point TWY Z will remain off when configuration RWY 01/07R is used.

Aircraft and vehicles shall never cross a lit stopbar.

When a lit stopbar cannot be cycled, the RWY entry point will be taken out of service and aircraft and vehicles will be rerouted. If rerouting is not possible, ATC will clear the aircraft or vehicle to cross a lit stopbar, stating the reason why the stopbar remains lit in each individual clearance.

When stopbars for all RWY entry points of one or more RWY cannot be lit, this shall be announced via RTF and ATIS, as well as via NOTAM if the outage is estimated to occur for a period of at least two hours.

Pilots are reminded that when stopbars are not lit, this does not constitute an authorisation of any kind to enter a RWY, irrespective if this RWY is active or not. An explicit clearance or instruction to enter or cross any RWY is required.

2.3 Standard Taxi Routes

2.3.1 General

Aircraft requiring full length for departure shall advise GND at the latest when requesting taxi clearance.

Arriving aircraft shall remain on TWR frequency until instructed to contact GND.

Ground operations are controlled by two sectors: GND North and GND South (see chart <u>AD 2.EBBR-GMC.03</u>). Transfer of control and communication point between GND N and GND S is TWY INN 8 or OUT 8.

Aircraft will be transferred to the appropriate TWR frequency to enter or cross an active runway. An explicit clearance to cross or enter **any** runway shall be issued by ATC. If no such clearance is received, pilots shall obtain it from ATC before crossing the relevant holding position marking.

2.3.2 Runway Configuration 25L (Arrivals) / 25R (Departures)

Departures originating from sector GND N will expect to depart from B1. Departures originating from sector GND S will expect to depart from W41 or W42.

Clearance to cross RWY 01/19 at E4-F4, E5-F4 or E6-F5 may be given by GND. Aircraft arriving on RWY 25L and proceeding via E1 or E3 will receive clearance to cross RWY 01/19 from TWR.

2.3.3 Runway Configuration 25L and 25R (Arrivals) / 19 and 25R (Departures)

All departures for RWY 25R will expect to depart from B1.

All departures for RWY 19 will expect to depart from E7.

Aircraft requiring full length for departure (RWY 19 and RWY 25R) will receive clearance to cross RWY 01/19 from TWR.

2.3.4 Runway Configuration 07L (Arrivals) / 07R (Departures)

Departing traffic RWY 07R will receive take-off clearance on TWR FREQ 118.605 (8.33 KHZ CH).

2.3.5 Runway Configuration 01 (Arrivals) / 07R (Departures)

Traffic departing from RWY 07R, lining up via P9 and departing from position H or position 1, will receive line-up clearance on GND S FREQ 121.880 (8.33 KHZ CH).

Departing traffic will receive take-off clearance on TWR FREQ 120.780 (8.33 KHZ CH).

2.3.6 LVP

See EBBR AD 2.22, <u>§ 4.1.2</u>.

2.4 Taxiway Restrictions

When an A380 is present on TWY OUT, traffic on parallel TWY INN must be limited to Code D aircraft.

Pilots must not enter TWY W41 or W42 when A380 is present on TWY W41 or W42.

Pilots of A380 must not enter TWY W41 or W42 when another aircraft is present on TWY W41 or W42.

For A380 taxiway restrictions see chart AD 2.EBBR-GMC.06a.

TWY A1 and TWY N6 may only be used by aircraft to and from EBMB.

All aircraft with wingspan > 45 M taxiing to/from EBMB only via TWY A3.

3 APRON REGULATIONS

3.1 Docking Guidance

When arriving at parking positions on remote stands or on stands where no guidance system is installed, pilots shall **not enter the stand unless a marshaller is present for guidance. In case no marshaller is present,** contact GND, **request** marshaller guidance and await the marshaller on the taxiway centre line.

Parking stand 140 to 174, 201 to 240, 680 to 699, 957 and 959 to 966 are equipped with a docking guidance system. Guidance to these stands by marshallers may still be requested from GND.

When the pilot receives from the guidance system a wrong type of aircraft, a wrong flight number, an ERR-message, an ESTOP emergency stop message or if the display becomes unreadable, **the aircraft must be stopped immediately**, contact GND and ask for a marshaller **and hold position**.

System messages on parking stand 140, 142, 144, 146, 162, 164, 147, 149L, 149R, 151, 153L, 153R, 155, 157L, 157R, 159, 161, 163, 171, 680 to 694 and 696 to 699				
"Flight number" / "Aircraft type" flashing	Gate is ready for docking. Aircraft is not yet detected.			
"Aircraft type" steadily	Aircraft has been detected. Aircraft symbol appears and system guides the pilot.			
"Distance"	Distance to stop position in metres. Approach slowly.			
Arrow <	Correction to the left required.			
Arrow >	Correction to the right required.			
"STOP"	Stop now, the docking position has been reached.			
"OK"	Docking successful.			
"STOP TOO FAR"	Aircraft has gone past the stop position.			
"ESTOP"	Emergency stop. Stop aircraft immediately and await marshaller instructions.			
"BRIN" / "STOP"	Bridge is not in good position. Stop aircraft and contact ATC (not applicable at stands 680 to 699).			

System messages on parking star	id 143, 145L, 145R, 148, 150, 152, 154, 156, 158, 160, 165L, 165R, 166, 168, 169L, 169R, 170, 172, 174, 957 and 959 to 966
WAIT (in red)	Self test after starting of the system or when losing track of aircraft 15 M before stopposition.
"Aircraft type" + "Flight number" + "rolling arrows"	DGS ready for docking. Aircraft not yet detected. Warning: pilot must not proceed beyond the bridge, unless the arrows have been superseded by the yellow centre line.
"Aircraft type" + "yellow centre line"	Aircraft detected and tracked. The yellow centreline shrinks as the aircraft nears its configured stop-position.
"Aircraft type" + "distance"	Distance from stop position in meters (from +/- 30 M).
Arrow >	Correction to the right required. A flashing red and/or yellow arrow indicates the direction to turn for the azimuth guidance. The yellow arrow indicates the aircraft position in relation to the centerline.
Arrow <	Correction to the left required. A flashing red and/or yellow arrow indicates the direction to turn for the azimuth guidance. The yellow arrow indicates the aircraft position in relation to the centerline.
STOP (in red)	Stop now, docking position has been reached or emergency stop.
ОК	Docking successful.
STOP + TOO FAR	Aircraft has gone past the stop position.
"Aircraft type" + SLOW	Approach on too high speed, reduce approach speed.
WAIT + GATE BLOCK	Object is detected. Docking procedure stopped. The docking procedure will resume as soon as the blocking object has been removed.
WAIT + VIEW BLOCK	Message coming when the closest view is hindered. (Laser problem, dust on the glass,). Closing rate display comes again when the problem is resolved.
STOP + SBU	Internal error (safety backup). Stop aircraft and contact ATC.
STOP + ERROR	Configuration error. Stop aircraft and contact ATC.
WAIT + BR IN	Bridge is not in good position. The docking procedure will resume as soon as the bridge is in the good position.
STOP (in red) + ID FAIL	Bad type of aircraft detected. Stop aircraft and contact ATC.
IN-BLOCK "XX:XX" LT	Actual in-block time in local time.
OFF-BLOCK "xx:xx" LT	Actual off-block time in local time.
TOBT : "xx:xx" z TSAT : "xx:xx" z -XX min	TOBT (Target off-block time) in Zulu time. TSAT (Target start-up approval time) in Zulu time. Countdown to TOBT in minutes.

System messages on parking stand 201 to 240				
WAIT (in red)	Self test after starting of the system or when losing track of aircraft 15 M before stop- position.			
"Aircraft type" + "rolling arrows"	DGS ready for docking. Aircraft not yet detected. Warning: pilot must not proceed beyond the bridge, unless the arrows have been superseded by the yellow centre line.			
"Aircraft type" + "yellow centre line"	Aircraft detected and tracked. The yellow centreline shrinks as the aircraft nears its configured stop-position.			
"Aircraft type" + "distance"	Distance from stop position in meters (from +/- 30 M).			
Arrow >	Correction to the right required. A flashing red and/or yellow arrow indicates the direction to turn for the azimuth guidance. The yellow arrow indicates the aircraft position in relation to the centerline.			
Arrow <	Correction to the left required. A flashing red and/or yellow arrow indicates the direction to turn for the azimuth guidance. The yellow arrow indicates the aircraft position in relation to the centerline.			
STOP (in red)	Stop now, docking position has been reached or emergency stop.			
ОК	Docking successful.			
STOP + TOO FAR	Aircraft has gone past the stop position.			
"Aircraft Type" + SLOW	Approach on too high speed, reduce approach speed.			

Sy	System messages on parking stand 201 to 240				
WAIT + GATE BLOCK	Object is detected. Docking procedure stopped. The docking procedure will resume as soon as the blocking object has been removed.				
WAIT + VIEW BLOCK	Message coming when the closest view is hindered. (Laser problem, dust on the glass,). Closing rate display comes again when the problem is resolved.				
STOP + SBU	Internal error (Safety Backup). Stop aircraft and contact ATC.				
STOP + ERROR	Configuration error. Stop aircraft and contact ATC.				
WAIT + BR IN	Bridge is not in good position. The docking procedure will resume as soon as the bridge is in the good position.				
STOP (in red) + ID FAIL	Bad type of aircraft detected. Stop aircraft and contact ATC.				
BTIME "XX:XX:XX"	Actual in-block or off-block time in local time.				
TOBT : "xx:xx" TSAT : "xx:xx"	TOBT (Target off-block time) in Zulu time. TSAT (Target start-up approval time) in Zulu time.				

Note: Two simultaneous messages are always shown in an alternate way.

3.2 Push-back

Unless prior permission has been obtained from the Airside Inspection, push-back is compulsory at nose-in stands. Pushback shall be executed immediately after approval has been received from GND, taking into account the traffic information and/or restrictions contained in the approval message.

ATC can give push-back instructions that overrule the standard procedures. The captain shall notify the headset operator who shall notify the puschback driver.

The pilot shall always relay push-back instructions received from ATC to the headset operator (see below, § 3.2.1). If - for unforeseen reasons - the push back operator is unable to perform the push-back following the standard procedures or the special ATC instructions, he shall immediately inform the captain who shall inform ATC. Simultaneous push-back of aircraft on adjacent stands is not allowed below 400 M RVR. Power out on reverse thrust is not allowed. Power out on nose-in stand is not allowed, except when authorized by Airside Inspection.

3.2.1 Standard Phraseology

- For push-back according to the standard procedure, the phraseology, will be: *"Push-back approved [facing E (W, N, S)]".*
- For push-back according to special instructions from ATC, the phraseology will state **the special instructions**: *"Push-back approved*. **Push on T (R, S, U, Inner, Outer)**, [facing E (W, N, S)]".

3.2.2 Apron 1 North

Stand 144 till 158: all aircraft shall be pushed on the push line (white dotted line) or INN-4, ATC will specify nose facing East or West and specify use of INN-4 or push line (white dotted line) for push and pull. When pushing on push line (white dotted line), nose facing East, all pull forward no further than abeam stand 158.

Remarks:

- · It is not allowed to surpass the white dotted push line with the nose wheels of the aircraft
- It is not allowed to position the aircraft after pushback in such a way that the inner wing swings over the service drive situated behind the aircraft stands
- It is recommended that, in the beginning of the push back, a maximum swing is made with the aircraft and that afterwards the aircraft is pulled forward parallel to the A-pier

3.2.3 Apron 1 South

Stand 143 and 145 L/R: all aircraft shall be pushed no further than nose wheel limit line on TWY R4 (white perpendicular mark on TWY).

3.2.4 Apron 2 North

Stand 204: all aircraft shall be pushed on the push line no further than nose wheel limit line (white perpendicular mark on the push line) and pulled forward abeam stand 210 or further on ATC discretion.

No simultaneous push back from stands 204 and 145L allowed.

3.2.5 Apron 2 South

Stand 205 L: all aircraft shall be pushed backward with a slight turn to the right-hand side onto the push line. Nose gear no further than nose wheel limit line (white perpendicular mark on the push line). When pushed on TWY T, aircraft will be pulled forward abeam stand 207 or further when instructed by ATC. Full engine start only abeam stand 207 (TWY T).

Stand 205 R: when pushed on TWY T, all aircraft shall be pushed no further then nose wheel limit line (white perpendicular mark on the TWY).

Stand 207: All aircraft shall be pushed on TWY, when pushed on TWY T pull forward abeam stand 207 or further when instructed by ATC. Full engine start only abeam stand 207 (TWY T).

3.2.6 Apron 3 North

- ICAO aircraft code F shall be pushed onto TWY T.
- ICAO aircraft code C, D, E: all aircraft shall be pushed on TWY, when pushed on TWY T full engine start only abeam stand 207.
- Stand 312: all aircraft shall be pushed on TWY, nose facing West only.

3.2.7 Apron 3 South

Stand 313, 317 and 321: all aircraft (fleetmix) push back via STRIP 0 on TWY INN 9 or INN 10 on ATC discretion.

Stand 315 and 319: all aircraft (fleetmix) push back on STRIP 0, nose facing East, nose gear no further than nose wheel limit line (white perpendicular mark on TWY.

Stand 323: all aircraft (fleetmix) push back on TWY INN 9 or INN 10 on ATC discretion.

3.2.8 Satellite (apron 3)

Stand 305: when pushing on TWY Z, nose facing West, all aircraft shall be pushed via lead out line, no further then nose wheel limit line (white perpendicular mark on the TWY).

Stand 306: all aircraft shall be pushed on TWY Z via strip 1, ATC will specify nose facing East or West.

3.2.9 Apron 9 West

Stand 950: When push back nose facing East, all aircraft shall be pushed on push line, no further than nose wheel limit line (white perpendicular mark on push line) and pull forward on TWY N1, clear of TWY A7.

Stand 951: All aircraft shall be pushed on TWY N2 clear of TWY A7, nose facing West only (in case of A380 push back only allowed under supervision of Airside Inspection).

Stand 952 and 954: When push back nose facing East, all aircraft shall be pushed on TWY N1, no further than nose wheel limit line (white perpendicular mark on TWY N1).

Stand 950-955: When push back nose facing West, all aircraft shall be pushed back on TWY N2 clear of TWY A7.

Position 957: Push back nose facing East or West at ATC discretion, push on TWY N1/N2 clear of TWY A7.

Position 959: Push back nose facing East or West at ATC discretion, when push back nose facing East, all aircraft shall be pushed on TWY N2 and pulled forward abeam stand 961 clear of TWY A7 or all aircraft shall be pushed on TWY N1 clear of TWY A7.

3.2.10 Apron 9 East

Position 969 and 970: When push back nose facing West, all aircraft shall be pushed on push line via lead-in line stand 971, nose gear no further than nose wheel limit line (white perpendicular mark on push line) and pulled forward abeam stand 969. Full engine start only abeam 969.

Position 971: When push back nose facing West, all aircraft shall be pushed on lead-in line stand 971, nose gear no further than nose wheel limit line (white perpendicular mark on push line) and pulled forward abeam stand 969. Full engine start only abeam 969.

4 RUNWAY REGULATIONS

4.1 Selection of Runway-in-use

The direction in which aircraft take off and land is determined by the speed and direction of the surface wind or by the preferential runway system.

The term "runway-in-use" is used to indicate the runway that - at a particular time - is considered by ATC to be the most suitable for use by the types of aircraft expected to land or take off according to the preferential runway system.

Normally, an aircraft will take off and land into the wind, unless safety, runway configuration or traffic conditions determine that a different direction is preferable. However, in selecting the runway-in-use, ATC shall also take into consideration other relevant factors such as the aerodrome traffic circuits, the length of the runway, the approach and landing aids available, meteorological conditions, aircraft performance, the existence of a preferential runway system and noise abatement.

Accepting a runway is a pilot's decision. If the pilot-in-command considers the runway-in-use not usable for reasons of safety or performance, he shall request permission to use another runway. ATC will accept such request, provided that traffic and air safety conditions permit.

4.2 Preferential Runway System

4.2.1 Runway Configuration Scheme

		0500 to 1459 (0400 to 1359)	1500 to 2159 (1400 to 2059)	2200 to 0459 (2100 to 0359)
MON 0500 (0400)	TKOF	25R		25R / 19 ⁽¹⁾
till TUE 0459 (0359)	LDG	25L /	25R	25R / 25L ⁽²⁾
TUE 0500 (0400)	TKOF	25	ōR	25R / 19 ⁽¹⁾
till WED 0459 (0359)	LDG	25L /	25R	25R / 25L ⁽²⁾
WED 0500 (0400)	TKOF	25	ōR	25R / 19 ⁽¹⁾
till THU 0459 (0359)	LDG	25L / 25R		25R / 25L ⁽²⁾
THU 0500 (0400)	TKOF	25R		25R / 19 ⁽¹⁾
till FRI 0459 (0359)	LDG	25L / 25R		25R / 25L ⁽²⁾
FRI 0500 (0400)	TKOF	25R		25R ⁽³⁾
till SAT 0459 (0359)	LDG	25L / 25R		25R
SAT 0500 (0400)	TKOF	25R	25R / 19 ⁽¹⁾	25L ⁽⁴⁾
till SUN 0459 (0359)	LDG	25L / 25R	25R / 25L ⁽²⁾	25L
SUN 0500 (0400)	TKOF	25R / 19 ⁽¹⁾	25R	19 ⁽⁴⁾
till MON 0459 (0359)	LDG	25R / 25L ⁽²⁾	25L / 25R	19

⁽¹⁾ RWY 25R only for traffic via ELSIK, NIK, HELEN, DENUT, KOK and CIV / RWY 19 only for traffic via LNO, SPI, SOPOK, PITES and ROUSY; aircraft with MTOW between 80 and 200T can use RWY 25R or 19 (at pilot discretion); aircraft with MTOW > 200T shall use RWY 25R regardless the destination.

⁽²⁾ Arrival on RWY 25L at ATC discretion only.

(3) No airport slot will be allocated for take-off between 0000 (2300) and 0500 (0400) (EBBR AD 2.20, § 1).

⁽⁴⁾ No airport slot will be allocated for take-off between 2300 (2200) and 0500 (0400) (EBBR AD 2.20, § 1).

Times of runway changeover are subject to flexibility in order to ensure transition in safe conditions. ATC will operate the changeover as close as possible from the indicated time, taking into account the traffic conditions.

4.2.2 Wind Criteria

In selecting the runway combination to be used, the following wind components shall be applied:

Runway-in-use: wind components are exceeded at:

	RWY 25L/R	RWY 19 (TKOF only)
Tailwind MAX	7KT	7KT
Crosswind MAX	20KT	20KT

	RWY 01	RWY 07L/R	RWY 19 (TKOF and ARR)
Tailwind MAX	0KT - 3KT (incl)	0KT - 3KT (incl)	0KT - 3KT (incl)
Crosswind MAX	20KT	20KT	20KT

Note: (incl) means that the wind component threshold is exceeded when the component exceeds 3KT.

4.2.3 Exceptions

The preferential runway system is not the determining factor in runway selection under the following circumstances:

- a. when the crosswind component exceeds 20KT or more (gusts included);
- b. when the tailwind component exceeds 7KT or more (gusts included);
- c. when the runways are contaminated or when estimated surface friction is less than good;
- d. when alternative runways are successively requested by pilots for safety reasons;
- e. when pilots report excessive wind at higher altitudes resulting in go-arounds;
- f. when wind shear has been reported or forecast, or when thunderstorms are expected to affect arriving or departing traffic;
- g. when works are in progress on one of the runways included in the preferential runway system;
- h. for landing, when the ceiling is lower than 500FT or the visibility is less than 1900M;
- i. for departure, when the visibility is less than 1900M.

Gust components are derived from the maximum 3 second average wind speed which occurred during the last 10 minutes (or a shorter period in case of a marked discontinuity).

4.2.4 Definitions

Following definitions (based upon JAR-OPS terminology) apply:

- A runway is considered **contaminated** when more than 25% of the runway surface area (whether in isolated areas or not) within the required length and width being used is covered by:
 - surface water more than 3MM deep, or by slush or loose snow, equivalent to more than 3MM of water;
 - snow that has been compressed into a solid mass that resists further compression and will hold together or break into lumps if picked up (also referred to as "compacted snow") or;
 - · ice, including wet ice.
- Estimated surface friction "good" is a comparative value meaning that aircraft should not experience directional control or braking difficulties and that stopping is available within the scheduled distance, but that conditions are not as good as when landing on a clear, dry runway.

4.3 Runway Occupation

In order to avoid go-arounds, aircraft should vacate the runway quickly, without prejudice to safety. Pilots should take into consideration that it might be more efficient to use an exit situated farther away, than to try to vacate too quickly, miss the exit and then having to taxi slowly to the next. The aim should be to achieve a normal touchdown with progressive smooth deceleration to vacate, at a safe speed, at the nominated exit point.

The table below indicates the distances to exit. The exits are grouped in left or right turns and by increasing distance.

RWY	exit	distance to exit (M)
	C1	860
	C2	1232
25L	C3/C4	1791
	C5	2148
	C6	2405

5 SPECIFIC TRAFFIC REGULATIONS

5.1 Aircraft Without Radio

Aircraft without radio are prohibited.

5.2 Glider Flights

Glider flights are prohibited.

5.3 ULM Flights

ULM flights are prohibited.

5.4 Balloon Flights

Balloon flights are prohibited.

5.5 Parachuting

Parachuting is prohibited.

5.6 Acrobatic Flights

Acrobatic flights are prohibited.

5.7 Training and Test Flights

Provided traffic conditions permit, training and test flights may be performed using RWY 25L/R, outside following periods:

- 2200-0459 (2100-0359);
- MON to FRI: 0600-1000 (0500-0900) and 1600-1900 (1500-1800);
- SAT: 0700-1000 (0600-0900);
- SUN: 1600-2000 (1500-1900).

Local VFR is not allowed during HN.

6 OPERATIONS OF LARGE AIRCRAFT

6.1 Aircraft Code F

Aircraft code F are subject to a special permission. However, A380 and B747-8/-8F are authorised to operate at EBBR.

For A380 taxiway restrictions see chart AD 2.EBBR-GMC.06a.

For B747-8/-8F taxiway restrictions see chart AD 2.EBBR-GMC.06b.

6.2 A380 Operations

6.2.1 General

Operators of A380 aircraft may designate Brussels Airport as a nominated diversionary aerodrome subject to prior agreement by Airside Inspection +32 2 753 69 00 and assessment of the handling facilities by the airline.

6.2.2 Aprons and Aircraft Stands

Designated aircraft stand 233L, equipped with triple apron boarding bridge and four power units.

Additionally, remote stands 322 and 328 are available for A380 parking.

Aircraft stands 951 and 954 suitable for remote handling. Push back from stand 951 only allowed under supervision of Airside Inspection.

7 DE-ICING OPERATIONS

7.1 On stand de-icing

On stand de-icing is performed for:

• aircraft that are not allocated to be de-iced on a remote de-icing platform.

Aircraft handled on apron 9:

- de-icing on stands 950, 951, 952, 953, 954, 955 may not be allowed on apron 9, only de-icing allowed on remote deicing platform
- for departures from RWY 01 or RWY 07R de-icing platform South, M and stand 304 (see <u>AD 2.EBBR-GMC.07</u>) are available for de-icing. For stand 304 engines shut down is required. In case of de-icing on stand 304, pilot requests taxi to stand 304 and no start-up clearance (movement to stand 304). Once de-icing is complete, pilot requests actual start-up (activation of flight plan) and push-back

7.2 Remote de-icing

Remote de-icing can be performed on one of the following locations see AD 2.EBBR-GMC.07:

- De-icing platform W:
 - VHF frequency for de-icing platform coordinator, contact 129.805 (8.33 KHZ CH)
 - offers two de-icing stands for aircraft:
 - W22 up to ICAO code C
 - W21 up to ICAO code E
 - pilot shall confirm ICAO aircraft code to the de-icing coordinator
 - in case TWY W21 is used by aircraft greater than ICAO code C, TWY W22 becomes unavailable until aircraft on TWY W21 has vacated TWY W21
 - · simultaneous de-icing on TWY W21 and TWY W22 is possible for aircraft up to ICAO code C only

- note that the two de-icing stands are not on the same level, pilots shall thus line up with the de-icing stop of their assigned de-icing pad and not line up with the aircraft on the adjacent pad
- · de-icing platform W cannot be used when RWY 01 or RWY 19 is in use
- · when de-icing platform W is active, TWY F4 is restricted to ICAO code C aircraft
- De-icing platform M, on TWY M:
 - VHF frequency for de-icing platform coordinator, contact 121.730 (8.33 KHZ CH)
 - · offers one de-icing stand for aircraft up to ICAO code E
 - · de-icing platform M is not available during arrival peaks
 - when instructed by ATC to proceed to de-icing hold position pilot shall make sure to position aircraft correctly on de-icing hold position
 - after de-icing pilots shall await further instructions from ATC before taxiing from the de-icing stop position
- De-icing platform South:
 - VHF frequency for de-icing platform coordinator, contact 129.805 (8.33 KHZ CH)
 - · offers three de-icing stands for aircraft:
 - stand 326 and 330 up to ICAO code C
 - stand 328 only ICAO code D and E
 - pilot shall confirm ICAO aircraft code to the de-icing coordinator
 - after de-icing, stands to be vacated via lead out lights in front of aircraft after contact with ATC
 - in case stand 328 is used, no aircraft allowed on stand 326 and 330
 - simultaneous de-icing on stand 326 and 330 is possible for aircraft up to ICAO code C only

ATC will provide taxi clearance up until the holding point to the remote de-icing platform. After which pilots will be requested to contact the platform coordinator on VHF FREQ indicated above according de-icing platform assigned or await instructions by manual hand signals from the de-icing platform coordinator.

Upon completion of de-icing, pilots will only contact the GND FREQ after having received the confirmation of the platform coordinator that the platform is clear.

EBBR AD 2.21 Noise Abatement Procedures

1 GENERAL

1.1 Noise Restrictions

Movements of jet aircraft with MTOW ≥ 34T or with a capacity of more than 19 seats (crew-only seats excl) are restricted:

- take-off or landing with QC > 8.0 is forbidden between 2200 and 0459 (2100 and 0359);
- take-off or landing with QC > 12.0 is forbidden between 0500 and 0559 (0400 and 0459);
- take-off with QC > 48.0 is forbidden between 0600 and 1959 (0500 and 1859);
- landing with QC > 24.0 is forbidden between 0600 and 1959 (0500 and 1859);
- take-off with QC > 24.0 is forbidden between 2000 and 2159 (1900 and 2059);
- landing with QC > 12.0 is forbidden between 2000 and 2159 (1900 and 2059).

Exemptions may be granted for:

- take-off between 2000 and 2159 (1900 and 2059) with QC ≤ 26.0 (with a maximum of 3% of the number of take-offs per year for this time period);
- take-off between 2200 and 0459 (2100 and 0359) with QC ≤ 12.0 (with a maximum of 200 take-offs per year only for aircraft that operated at EBBR between 25 OCT 2008 and 24 OCT 2009);
- landing between 2200 and 0459 (2100 and 0359) with QC ≤ 12.0 (with a maximum of 300 exemptions per year).

Exemptions shall be requested from the CAA in advance via FAX (+32 (0) 2 277 42 54) or via email (BCAA.inspect.env@mobilit.fgov.be).

The QC is calculated using the formula QC = $10^{[(G-85)/10]}$, whereby "G" equals:

- for take-off: half the sum of the certified fly-over and sideline noise levels in EPNdB of the aircraft at its MTOW;
- for landing: the certified approach noise level in EPNdB of the aircraft at its maximum landing weight, minus 9 EPNdB.

Take-off or landing of marginally compliant aircraft is forbidden between 2200 and 0459 (2100 and 0359).

Following flights are exempted from the noise quota system:

- flights carrying members of the Belgian Royal Family, the federal government, regional or community governments or foreign royal families, foreign heads of state or government leaders, the President or members of the European Commission on official mission;
- missions in case of disaster or medical urgency;
- military missions;

• take-off or landing performed in exceptional conditions (flights on which an immediate threat exists to the health of people or animals, diverted flights, etc.).

In case of circumstances beyond the operator's control, a non-compliant flight may be exceptionally allowed, provided that proper justification is sent to the Director-General of the CAA within two working days after the flight.

For marginally compliant aircraft, an authorization of temporary use may be delivered by the Minister of Transport or his representative, if the aircraft is operated exceptionally or in non-commercial flights for modifications, repairs or maintenance.

1.2 Reverse Thrust

Except for safety reasons, reverse thrust shall not be used at other than idle power. On the aprons, it is prohibited at any time.

1.3 Reduced Engine Taxi

Whenever operationally and safely feasible, all arriving aircraft are requested to shut down as many engines as possible while taxiing from the landing runway to their parking position.

2 GROUND PROCEDURES

2.1 Taxi Restrictions between 2200 and 0459 (2100 and 0359)

Maximum four aircraft are authorized to taxi simultaneously to the holding position(s) of the runway(s)-in-use. Additionally, only three aircraft are allowed to await take-off clearance at the holding position at the same time.

Engine run-up is not allowed at the holding position, except for run-up tests performed immediately before take-off as part of the take-off procedure.

2.2 Engine Test Runs and Idle Checks

Engine test runs and idle checks in the open air and without silencers must be restricted to the very minimum and require prior permission from the Airport Authority.

Engine test runs are only allowed between 0600 and 2100 (0500 and 2000). They can only take place on the crossing of TWY F3, Y, W1 and W21. If this crossing is not available due to infrastructural reasons, TWY D2 may be used instead.

Engine test runs shall be requested via Airside Inspection (TEL +32 (0) 2 753 69 00). ATC to be contacted for start-up and taxi instructions to the engine test location.

Idle checks on the aircraft stand shall be requested via Airside Inspection (TEL +32 (0) 2 753 69 00). ATC must not be contacted to obtain start-up permission to execute the idle run.

2.3 **Power Supply**

The aircraft parking stand 140 to 174, 201 to 240, 680 to 699, 957, 959 to 971 are equipped with 400 HZ and aircraft parking stand 140 to 174, 201 to 240 and 680 to 699 are equipped with pre-conditioned air (PCA). As soon as possible after arrival at one of these stands (5MIN after docking MAX), 400 HZ shall be connected and the APU switched off. Upon departure (15MIN before ETD), the APU may be started and 400 HZ shall be disconnected. When 400 HZ or PCA is not available, GPU shall be used.

When no PCA is available and an authorization from the Airside Inspection has been obtained, the use of the APU is allowed during periods of extreme high or low temperatures for aircraft docked for more than 1 HR at the aircraft parking stand.

3 ARRIVAL PROCEDURES

3.1 ILS Approach

Aircraft performing an ILS approach shall not intercept the GP below:

- 2000FT QNH for RWY 25L/R (3000FT and 2000FT respectively in case of simultaneous approach);
- 2000FT QNH for RWY 01;
- 3000FT QNH for RWY 19.

After interception, the aircraft shall not descend below the GP.

3.2 Surveillance Radar Approach

Aircraft performing an SRA without ILS assistance, shall not descend below 2000FT QNH before 6NM from touchdown, nor fly thereafter below a descent path of 3°.

3.3 Visual Approach

Aircraft performing a visual approach without ILS or radar assistance, shall not descend below 1800FT QNH before intercepting the PAPI approach slope, nor fly below it thereafter.

3.4 Vectored Continuous Descent Operations (CDO)

When the traffic situation permits, ATC will facilitate vectored continuous descent for all RWY.

Facilitation of CDO will be provided at ATC discretion only.

When vectoring for continuous descent, ATC will, as soon as practicable after first call on the APP frequency, provide distance from touchdown and an approval to descend at pilot's discretion. The phraseology "when ready, descend" shall be used.

CDO will not be facilitated in adverse weather conditions that may affect the approach (wind shear, thunderstorms, etc).

Subject to ATC instructions, inbound aircraft shall adopt a continuous descent profile - to the greatest possible extent compatible with safe operation of the aircraft - by employing minimum engine thrust, ideally in a low drag configuration, prior to the FAF/FAP.

Note: All noise abatement procedures for arrivals as well as the speed limitations in EBBR AD 2.22, <u>§ 2.1.3</u> remain applicable when performing CDO.

3.5 Speed Limitation

Aircraft being radar vectored shall reduce speed to 250KIAS when entering the radar vectoring area or when below FL100. 250KIAS MAX shall be respected by all pilots as soon as they cross one of the speed limiting points (SLP) as shown on chart <u>AD 2.EBBR-STAR.01</u>.

3.6 Special Procedures for Arrivals between 2200 and 0459 (2100 and 0359)

Traffic leaving IAF KERKY for approach to RWY 25L/R will not be cleared to descend below FL70 until crossing R-360 BUB unless for vectored continuous descent operations (see § 3.4 above).

4 DEPARTURE PROCEDURES

4.1 General

The SID (see EBBR AD 2.22, § 3.2.1) constitute noise abatement procedures. It is therefore emphasized that pilots shall adhere to these routes as closely as performance permits. If unable to comply with these procedures, they shall advise ATC immediately.

4.2 Climb Gradient

In order to minimize noise nuisance, to clear obstacles in the departure area and for compliance with ATS airspace limits, aircraft shall maintain a net climb gradient of 7% MNM until passing 3200FT QNH. If unable to comply, pilots shall advise ATS accordingly when requesting start-up clearance.

4.3 Noise Abatement Take-off and Climb Procedures

The following operational noise abatement take-off procedures must be applied for outbound flights:

For turbo-jet aircraft:

- from take-off to 1700 FT QNH:
 - take-off power;
 - take-off flaps;
 - climb to V2 + 10 to 20KT or as limited by body angle;
- at 1700FT QNH:
 - reduce thrust to not less than climb thrust;
- from 1700 FT QNH to 3200 FT QNH:
 - climb at V2 + 10 to 20KT;
- at 3200 FT QNH:
 - accelerate smoothly to en-route climb speed with flaps retraction.
- For propeller aircraft:
 - from take-off to 1700 FT QNH:
 - take-off power;
 - · climb at maximum gradient compatible with safety;
 - · speed not less than single engine climb speed, nor higher than best rate of climb speed;
 - at 1700FT QNH:

- reduce power to the maximum normal operating power (if this power has been used for showing compliance with the noise certification requirements) or to the maximum climb power;
- from 1700FT QNH to 3200FT QNH:
 - climb at the maximum gradients with reduced power, maintaining constant speed;
- at 3200FT QNH:
 - accelerate smoothly to en-route climb speed.

4.4 Speed Restrictions

Unless otherwise instructed by ATC for safety reasons, maximum speed below FL100 is 250KIAS or clean speed (V_{ZF}), whichever is higher.

4.5 Special Procedures for Aircraft with MTOW > 200T

When preferential runway system configuration RWY 25R/19 is in use for departures, the following aircraft shall use RWY 25R for departure, regardless of their destination.

ICAO aircraft type (see ICAO Doc 8643)											
A124	A332	A333	A342	A343	A345	A346					
A351	A359	A388	AN22	B741	B742	B743					
B744	B748	B74R	B74S	B764	B772	B773					
B77L	B77W	B781	B788	B789	C5	C17					
DC10	IL96	L101	MD11								

The table mentioned above is not limitative, the MTOW of the aircraft prevails.

4.6 Special Procedures for Departures between 2200 and 0459 (2100 and 0359)

All departures from RWY 25R shall start their take-off at the beginning of the runway and preferably an uninterrupted take-off from W41/W42 will be made.

EBBR AD 2.22 Flight Procedures

1 GENERAL

1.1 Aerodrome Minima

For specific landing minima, see charts:

- AD 2.EBBR-IAC.01
- AD 2.EBBR-IAC.02
- AD 2.EBBR-IAC.08
- AD 2.EBBR-IAC.09
- AD 2.EBBR-IAC.10

2 IFR FLIGHTS (INBOUND)

2.1 General

2.1.1 Aircraft Equipment

DME is compulsory for all inbound IFR traffic.

2.1.2 Radar Vectoring

Radar vectoring may be expected when crossing 30 DME BUB.

In case of radar vectoring, the intermediate approach procedure may be partially or completely omitted. The clearance limit assigned by Brussels ACC will then be replaced by a clearance to a final approach aid or radar vectors will be given to direct the aircraft to a position from where final approach can be started or a visual approach made.

2.1.3 Speed Limitations

In case of ILS approach following speed limits apply, unless otherwise instructed by ATC:

- 250 KIAS below FL100;
- 220KIAS or more from IAF until LOC interception;
- 180KIAS or more at a distance of approximately 12NM from touchdown until 6NM from touchdown;
- 160KIAS until OM (or 4NM from THR RWY 19)¹.

Aircraft unable to maintain these speeds shall advice Brussels Arrival/Final on initial contact.

The speed limitations do not relieve pilots of their responsibility to observe any applicable noise abatement procedures (see <u>EBBR AD 2.21</u>).

(1) Aircraft unable to maintain 160KIAS until OM (or 4NM from THR RWY 19) will not be accepted during periods 0700-0900 (0600-0800) and 1700-1930 (1600-1830) ATA.

2.2 Holding Patterns

The holding patterns shall be entered at 170KIAS MAX (aircraft CAT A/B) or 230KIAS MAX (aircraft CAT C/D).

2.3.5 Standard Instrument Arrivals

STAR have been established as shown on the STAR charts (see <u>EBBR AD 2.24</u>) and as listed below. ATC may deviate from these routes and pilots may expect radar vectors for separation reasons or in order to expedite traffic flow.

Depending on traffic conditions (LVP in progress, etc.), ATC may clear traffic to hold at GSY DVOR/DME. At EAT, such traffic will be re-cleared for a standard approach or will be radar vectored for sequencing.

2.3.6 Surveillance Radar Approach

SRA is available on all runways and will be terminated either:

- at a distance of 2NM (RWY 01, 19, 25L/R) or 3NM (RWY 07L/R) from threshold;
- before the aircraft enters an area of continuous radar clutters;
- · when the aircraft reports that a visual approach can be made.

The aircraft will be informed at regular intervals of its position relative to the extended RCL and heading corrections will be given as necessary. The distance from THR will be passed on at each NM.

The levels through which the aircraft should be passing to maintain the glide path (3° or 5.2% on all runways) will also be passed on at each NM:

DIST to THR			Altitud	de (FT)		
(NM)	RWY 01	RWY 07L	RWY 07R	RWY 19	RWY 25L	RWY 25R
6	2000	2000	2000	2000	2000	2000
5	1800	1800	1800	1800	1800	1800
4	1500	1500	1500	1400	1500	1400
3	1200	1100	1200	1 100	1200	1 100
2	900	NIL	NIL	800	800	800

RWY	THR ELEV (FT)	INBD track (MAG)	DIST from FAF to THR (NM)	DIST from MAPT to THR (NM)	OCA (OCH) (FT)
01	175	013°	6	2	880 (700)
07L	121	064°	6	3	1030 (900)
07R	166	069°	6	3	1030 (860)
19	105	193°	6	2	800 (690)
25L	150	249°	6	2	800 (640)
25R	102	244°	6	2	800 (690)

2.3.7 Circling Approach

Circling approaches are prohibited.

2.3.8 Simultaneous Dependent Instrument Approaches on RWY 25L and 25R (SIMDEP)

Simultaneous dependent instrument approaches may be performed on RWY 25L and 25R in all meteorological conditions, provided that radio, radar and ILS equipment (both airborne and on the ground) are fully serviceable.

ATC will provide following separations:

- a minimum 1000FT vertical separation between aircraft during turn-on to the LOC course until interception;
- a minimum staggered radar separation of 2NM between aircraft established on the adjacent LOC. Minimum ICAO standard separations will continue to be applied between aircraft on the same LOC course.

The ATIS broadcast will include the following message: "Vectoring for simultaneous dependent ILS approach." When receiving this information, pilots shall advise ATC of the unavailability of any equipment needed to perform the approach.

Each pilot will be informed by Brussels APP of the assigned runway and shall acknowledge receipt of the message. The assigned runway will be repeated by ATC with the instruction for ILS interception.

Depending on traffic conditions, aircraft may be vectored to one of both LOC courses for a straight-in approach. If, for any reason, a vectored aircraft does not receive LOC interception instructions, the pilot will perform interception of the LOC serving the assigned runway by himself. In any case, pilots shall execute a precise interception, without overshooting the LOC axis. If overshoot occurs, ATC will instruct to return to the LOC course immediately.

Any undue track variation in relation to the LOC axis or any equipment malfunctioning shall be reported to ATC immediately, together with any decision to perform a missed approach. ATC will radar monitor the missed approach and transmit instructions to start a new approach.

2.3.9 Simultaneous Independent Instrument Approaches on RWY 25L and 25R (SIMINDEP)

Simultaneous independent instrument approaches without radar separation between aircraft on the adjacent runway centre lines may be performed on RWY 25L and 25R in all meteorological conditions, provided that following conditions are met:

- no adverse weather, such as wind shear, severe turbulence, thunderstorms,... is reported which might increase ILS LOC course deviations;
- radio, radar and ILS equipment (LOC, GP, DME and markers) are fully serviceable, both airborne and on ground.

ATC will provide following separations:

- a radar separation of at least 3NM and/or 1000FT vertical separation during turn-on to the LOC course until both aircraft are stabilized on the LOC course;
- 1000FT minimum vertical separation between aircraft established on adjacent LOC until 14NM from touchdown;
- minimum ICAO standard separations will continue to be applied between aircraft on the same LOC course.
- Note 1: No Transgression Zone (NTZ): A corridor of airspace of defined dimensions located centrally between the two extended runway centre lines where a penetration by an aircraft requires a controller intervention to manoeuvre any threatened aircraft on the adjacent approach.
- Note 2: An aircraft established on ILS LOC course is separated from another aircraft established on an adjacent parallel ILS LOC course, provided neither aircraft penetrates the NTZ as depicted on the radar display.

Following procedures apply:

- a. the ATIS broadcast will include the following message: "Vectoring for simultaneous independent ILS approach in progress - ILS 25R 108.9; ILS 25L 110.35." When informed by ATIS that SIMINDEP are in progress, pilots will advise ATC of any unavailability of required equipment;
- b. each pilot will be informed by Brussels APP of the assigned runway for landing and shall acknowledge receipt of the message. The assigned runway (25L or 25R) will be repeated by the controller with the instruction for ILS interception;
- c. pilots experiencing radio-communication failure before runway assignment shall execute an ILS approach on RWY 25L;
- d. if for any reason an aircraft being radar vectored does not receive LOC interception instructions, the pilot shall intercept the ILS/LOC course serving the **assigned** runway by himself;
- e. pilots shall execute precise LOC interception (not overshooting the LOC axis);
- f. if an aircraft is observed to overshoot the assigned LOC course during its turn to final on the assigned runway, the pilot will be instructed to return to the LOC course immediately;
- g. when an aircraft is observed penetrating the NTZ, the aircraft on the adjacent LOC course will be immediately cleared by the appropriate controller to climb and turn away (45° MAX) from penetrating aircraft;
- h. any undue track variation in relation to the LOC axis or any equipment malfunction shall be reported immediately to ATC, together with any decision to perform a missed approach. ATC will exercise radar monitoring of the missed approach and will transmit instructions to start a new approach.

2.4 Missed Approach

Unless instructed otherwise by Brussels TWR or Brussels APP, the missed approach procedures as published on the instrument approach charts (see <u>EBBR AD 2.24</u>) shall be followed.

3 IFR FLIGHTS (OUTBOUND)

3.1 Starting Procedures

3.1.1 Airport Collaborative Decision Making (A-CDM)

CDM is part of the European programme "Single European Sky" to optimize airspace and airport operations. Major European airports started implementing local CDM-programmes (A-CDM) which will become a harmonized procedure in Europe.

A-CDM is about partnership at airports between Airport Operations, Air Traffic Control, Aircraft Operators, Slot Coordinator and Ground Handlers. Emphasis is put on:

- · linking the inbound, turn-round and outbound processes;
- the sharing of the right information at the right time to the right people best placed to act upon it; and
- the improved flight operational data exchange between airports and the ATFM-Network.

3.1.1.1 CDM-Procedures

3.1.1.1.1 Flight Plan Check

The ATC FPL-originator needs to check if the flight has a valid airport slot and that the scheduled departure time of the related ATC flight plan is in line with the Airport Slot. If they do not correspond, the contact address will be informed together with the request to coordinate the times. The CDM-process may be blocked if the flight is not coordinated according the rules and the flight plan may be rejected (no TSAT) if the air carrier intends to take off without having an airport slot allocated

by the Brussels Slot Coordinator (EC-Regulation N°793/2004 amending Council Regulation 95/93 on common rules for the allocation of slots at Community Airports, §14.1).

Filing and updating a flight plan is and remains the responsibility of the Aircraft Operator. He may delegate these tasks to his accredited Handling Agent.

3.1.1.1.2 TOBT-TSAT Procedure

INFO from airline / handler	товт	Target off block time: confirmation of estimated ready time
INFO from ATC	TSAT	Target start-up approval time, based on TOBT or EOBT (if TOBT not AVBL): sequenced off block time

TOBT represents the time that an Aircraft Operator or Handling Agent estimates that an aircraft will be ready, all doors closed, boarding bridge removed, push back vehicle available, ready to start-up immediately and push back within 5MIN after reception of start-up clearance from Tower.

TSAT is issued by ATC and represents the time at which an aircraft can expect start-up taking into account the ATFM restrictions and local constraints. ATC sequences the departures based on TOBT.

TSAT will be calculated from TOBT-25MIN onwards. Changes to the TOBT do not affect the TSAT in general, as long as the newly calculated TOBT is not later than TSAT. However it is of the utmost importance that a TOBT reflects the potential readiness of the aircraft since it is the basis for the determination of TSAT.

3.1.1.1.3 Actions by Cockpit Crew

Pilots at a stand with a Docking Guidance System display (e.g. Pier A&B, P60): TOBT is displayed from EOBT-20MIN onwards and TSAT appears at TOBT-5MIN.

Pilots at a stand with no Docking Guidance System display (e.g. on remote stands): TOBT can be obtained from the Redcap/Loadmaster and the TSAT becomes available at Brussels Delivery on FREQ 121.955 (8.33 KHZ CH) from approximately TOBT-10MIN onwards.

Start-up shall be requested from Brussels Delivery on FREQ 121.955 (8.33 KHZ CH) or via Digital Data Link (see below, § 3.1.2) in accordance with the related TSAT \pm 5MIN (TSAT takes the ATFM-slot into consideration, if any). Early requests without flight plan update are only allowed as of EOBT minus 15MIN. The start-up request shall only be made when the aircraft is "ready" (see TOBT-definition) and when push back (if required) becomes available. Pilots must check the pushback availability before requesting start-up.

If the flight is not ready at TSAT+5MIN, ATS will issue a new TSAT only after receipt of an updated EOBT. The IATA-delay code becomes "code 61".

Aircraft requiring full runway length shall include this in their start-up request. Pilots are reminded that noise abatement procedures affecting some runway distances remain to be adhered to (see EBBR AD 2.21, <u>§ 4.5</u>).

The request for push back and/or taxi shall be done on the GND frequency within 5MIN after reception of start-up clearance. TWR shall be advised if the latter is not possible and delay is expected. Otherwise, the TOBT will be deleted and must be entered again. If pilot does not call at TSAT+5MIN, ATC will issue a new TSAT only after receipt of an updated EOBT.

The pushback sequence of the handling agent is based on TSAT, not on TOBT. The pushback vehicle will become available at TSAT-5MIN.

3.1.1.1.4 Actions by Airline Representative or Handling Agent

The first TOBT is triggered automatically at EOBT-2H and copies the value of EOBT.

Until the Target Start-Up Approval Time (TSAT) has been issued, the TOBT can be corrected as often as desired.

If the TOBT cannot be adhered to, it must be corrected by the TOBT responsible person.

As the TOBT is triggering additional processes at the airport, TOBT adaptations shall be done as soon as possible. If a flight is to be withdrawn from the TOBT and/or TSAT calculation, the TOBT shall be cancelled. To set this process in motion again, the TOBT shall be filed anew. It is still mandatory to send a delay message to the IFPS if the EOBT deviates by 15MIN or more.

Note: Restricted flights should not update their EOBT/TOBT in function of the related CTOT.

Aircraft Operators shall communicate known or expected delays to their Handling Agent and the Airport Partners well in advance.

In case of changing the aircraft and filing a change message (CHG-type / registration), the original TOBT will be retained.

3.1.1.1.5 Actions by ATC

The TOBT received by Brussels Delivery is processed and results in a TSAT, which can never be earlier than TOBT. Startup approval will only be granted from TSAT-5MIN till TSAT+5MIN.

3.1.1.2 CDM alerts

An alert mechanism monitors expected upcoming events to trigger data updates and consistency. These alert messages will be sent via the A-CDM Information Sharing Platform and are classified into 3 classes, sorted in decreasing priority:

- Primary Alert;
- · Secondary Alert; and
- Advisory Alert

React onto the alerts as required.

3.1.1.3 Coordination with Eurocontrol NM

A permanent and fully automatic data exchange with the Eurocontrol NM (Network Management) is established. This data transfer enables highly accurate early predictions of landing and departure times. Furthermore, this allows for more accurate and efficient calculation of the CTOT due to the use of local target take-off times.

The following system-to-system messages are used:

- Flight Update Message (FUM);
- Early Departure Planning Information Message (E-DPI);
- Target Departure Planning Information Message (T-DPI);
 - T-DPI-t is based on the TOBT and related updates;
 - · T-DPI-s is based on TSAT and related updates;
- · ATC Departure Planning Information Message (A-DPI);
- Cancel DPI (C-DPI).

The first DPI (E-DPI) is based on the Estimated Off-Block Time (=STD) and confirms the validity of the Airport Slot against a flight plan. The target DPIs are triggered by TOBT/TSAT and provide Target Take-Off Times, used to re-assess the impact on the Network. The final DPI is sent at Actual Off-Block Time and freezes the ATFM-slot.

The basic Eurocontrol NM procedures continue to apply. The Eurocontrol NM will generally take these local target take-off times into consideration and will try to adjust the CTOT accordingly, if possible.

3.1.1.4 De-icing and A-CDM

EBBR has implemented the de-icing milestones in its A-CDM program, indicating start/end times and duration of de-icing. This means that for both on-stand and remote de-icing the de-icing operations are always excluded out of TOBT.

On-stand de-icing

Whenever a flight has been flagged for on-stand de-icing, the TSAT will be based on the Estimated End of De-icing Time (EEZT) instead of the TOBT.

The EEZT is a calculated element, derived from the ground handler's estimation of the start of de-icing (ECZT) + the expected duration of the de-icing job (EDIT). An update of the EEZT is provided when the de-icing job actually starts (ACZT).

Remote de-icing

Whenever a flight has been flagged for remote de-icing, the TSAT will be based on the ground handler's estimation of the start of the de-icing (ECZT) at the platform, taking into account the taxi time to the platform + a standard queueing time.

Pre de-icing

Flights that are flagged for pre de-icing are exempted from having to share the de-icing milestones.

Cancellation of de-icing

De-icing can be cancelled at any time after having been flagged for either on-stand or remote de-icing. When de-icing is requested again after cancellation, the process as described above has to be initiated again.

3.1.2 Data Link Clearance Delivery Service (DCL)

3.1.2.1 General

A DCL through Digital Data Link is implemented at Brussels TWR. The system, implemented through ACARS, uses the SITA network, which complies with the requirements and recommendations of *EUROCAE Document ED-85*.

To use DCL via Data Link, the user should have certified on-board equipment according to the recommendations of *Document ED-85* and comply with the entire operational procedure that overcomes the risk identified by *Document ED-85*.

In order to be authorized to use Brussels DCL, operators shall apply to the national authority responsible for their own operational oversight (or to the state of registry when appropriate) to obtain technical and operational approval to receive departure clearance over ACARS. When obtained, copy of such authorization shall be sent to skeyes:

Post: skeyes DGS&O Tervuursesteenweg 303 1820 Steenokkerzeel BELGIUM

The document shall indicate the type and registration of each authorized aircraft, as well as the ICAO and IATA aircraft operating agency designator of the operator.

3.1.2.2 Operational Use

DCL via Data Link can only be used by aircraft using SID whose specifications include level requirements.

The service does not provide clearance revision. Any clearance modification will be made via the Brussels Delivery voice frequency.

After reception of the departure clearance, the pilot shall send to the ground system an acknowledge message including the entire content of the clearance before contacting GND. In case a departure clearance is not received, the pilot shall contact Brussels Delivery by voice.

TSAT will be communicated from TOBT-10MIN onwards. Syntax: "Standby till TSAT hh:mm".

Note: TSAT on DGS has precedence over TSAT via Data Link (TSAT can only be sent once via DCL thus late TSAT-changes should be monitored via DGS).

The aircrew, before taking off, shall check the consistency of the SID delivered in the DCL message with the departure runway and the flight plan information. Voice procedures shall be used in case of inconsistency.

Departure clearance delivered by voice shall always supersede any DCL clearance. Pilots are reminded to keep a continuous listening watch on 121.955 (8.33 KHZ CH).

3.2 Departure Procedures

3.2.1 Standard Instrument Departures

SID have been established as shown on the EBBR SID charts (see <u>EBBR AD 2.24</u>) and as listed below. Pilots unable to comply shall inform ATC when requesting start-up clearance.

After take-off, aircraft shall remain on TWR frequency.

Note: ATC may deviate from these routes.

3.2.1.1 Route Description

RWY 01

Decignator	Rou	te	Pomorko
Designator	Lateral	Vertical	Remarks
LNO7F	At 700FT QNH TR 028. At 1700 FT QNH RT to intercept R-354 HUL INBD. At 6.0 DME HUL LT to intercept R-286 LNO INBD to LNO.	Cross R-044 HUL at FL60 (FL70 when QNH is below 977HPA) or above.	For TFC requesting a cruising or initial FL below FL195.
SPI7F	At 700FT QNH TR 028. At 1700FT QNH RT to intercept R-354 HUL INBD. At 6.0 DME HUL LT to intercept R-286 LNO INBD, RT to intercept R-294 SPI INBD to SPI.	Cross R-044 HUL at FL60 (FL70 when QNH is below 977HPA) or above.	NIL
SOPOK7F	At 700FT QNH TR 028. At 1700FT QNH RT to intercept R-354 HUL INBD. LT to intercept R-286 SPI INBD. When passing BULUX or climbing through FL170, whichever is later, RT direct to SOPOK.	Cross HUL at FL60 (FL70 when QNH is below 977HPA) or above.	ATC climb requirements: see <u>§ 3.2.2</u> below.
			ATC climb requirements: see § 3.2.2 below.
	At 700FT ONH TR 028. At 1700FT		CDR 1 - H24.
PITES7F	QNH RT to intercept R-354 HUL INBD. LT to intercept R-286 SPI INBD. When passing REMBA, RT direct to RITAX, DIK, PITES next.	Cross HUL at FL60 (FL70 when QNH is below 977 HPA) or above.	TEMPO CLSD on ATC instructions due to MIL requirements (alternative route: SOPOK7F- SOPOK - RITAX - DIK - PITES).
			Only when M150 between DIK and PITES is AVBL (alternative route: SOPOK7F - SOPOK - ETENO).
	At 700FT QNH TR 028. At 1700FT		ATC climb requirements: see § 3.2.2 below.
DOUGY7E	QNH RT to intercept R-354 HUL	Cross HUL at FL60 (FL70 when	CDR 1 - H24.
ROUSY7F	INBD. LT to intercept R-286 SPI INBD. When passing REMBA, RT direct to RITAX, ROUSY next.	QNH is below 977 HPA) or above.	TEMPO CLSD on ATC instructions due to MIL requirements (alternative route: SOPOK7F - SOPOK - RITAX - ROUSY).
			AVBL when RWY 01 in single RWY operations.
			ATC climb requirements: see § 3.2.2 below.
CIV/1E	QNH RT to intercept R-354 HUL		M617 southbound, MAX FL170.
CIVIF	INBD. At 3 DME HUL RT to intercept R-071 CIV INBD to CIV.		Y50 southbound, MAX FL190, compulsory for TFC DEST Paris TMA.
			N872 southbound, only for TFC flight planned above FL195.
KOK 2F	Climb straight ahead. At 1700FT QNH LT direct to KOK.		L607 westbound.
DENUT 8F	At 700FT QNH TR 008. At 1800FT QNH DCT to DENUT.		RNAV5 above MSA.
HELEN 8F	At 700FT QNH TR 008. At 1800FT QNH DCT to HELEN.		RNAV5 above MSA.
NIK 5E	At 700FT QNH TR 008. At 1700FT		M624 northbound.
	QNH LT direct to NIK.		Not to be used by TFC DEST EHAM.
	At 700FT QNH RT direct to BUN		L179 eastbound.
ELSIK 2F	ELSIK next.		To be used when adequate MIL airspaces are AVBL for GAT.

RWI U/L UNLI	RWY	07L	ONLY
--------------	-----	-----	------

Designator	Rou	te	Bomorko
Designator	Lateral	Vertical	Remarks
LNO6H	Climb straight ahead. At 17.7 DME AFI, RT to intercept R-082 AFI. At 22.7 DME AFI, RT to intercept R-139 ANT. RT to intercept R-173 BUN to REMBA. LT to intercept R-277 LNO INBD to LNO.		For TFC requesting a cruising or initial FL below FL 195.
LNO 2T	RNAV1 : BR751 - BR752 - BR705 - REMBA - LNO		RNAV1 Overlay of LNO6H For TFC requesting a cruising or initial FL below FL195.
LNO2W	Climb straight ahead. At 1 700FT QNH RT to intercept R-354 HUL INBD. At 6.0 DME HUL LT to intercept R-286 LNO INBD to LNO.	Cross R-044 HUL at FL 60 (FL 70 when QNH is below 977 HPA) or above if instructed by ATC.	For TFC requesting a cruising or initial FL below FL 195.
SPI7H	Climb straight ahead. At 17.7 DME AFI, RT to intercept R-082 AFI. At 22.7 DME AFI, RT to intercept R-139 ANT. RT to intercept R-173 BUN to REMBA. LT to intercept R-286 SPI INBD to SPI.		NIL
SPI 2T	RNAV1 : BR751 - BR752 - BR705 - REMBA - SPI		RNAV1 Overlay of SPI7H

	PITES next.		CDR 1 - H24
			requirements (alternative route: SOPOK9C - SOPOK - RITAX - DIK - PITES).
			Only when M150 between DIK and PITES is AVBL (alternative route: SOPOK9C - SOPOK - ETENO).
			RNAV1 Overlay of PITES8C
			Only AVBL from 0500 to 2159 (0400 to 2059) for DEP RWY 25R and H24 for DEP RWY 25L.
			ATC climb requirements: see § 3.2.2 below.
			To be used by single, two- and three-engine aircraft.
PITES 2G	RNAV1: [A1700+; L] -> HUL [A6000+] - BR102 - REMBA - RITAX - DIK - PITES	Cross HUL at FL60 (FL70 when QNH is below 977 HPA) or above.	May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16</i> , Chapter 3/FAR Part 36 Stage 3 and whose performances permit to adhere to the SID.
			CDR 1 - H24
			TEMPO CLSD on ATC instructions due to MIL requirements (alternative route: SOPOK 2G - SOPOK - RITAX - DIK - PITES).
			Only when M150 between DIK and PITES is AVBL (alternative route: SOPOK 2G - SOPOK - ETENO).

Decignator	Rou	te	Pomarka
Designator	Lateral	Vertical	Remarks
			Only AVBL from 0500 to 2159 (0400 to 2059) for DEP RWY 25R and H24 for DEP RWY 25L.
			ATC climb requirements: see § 3.2.2 below.
	Climb straight ahead. At 1700 FT QNH LT to HUL. After HUL intercept R-286 SPI INBD. When passing REMBA, RT direct to RITAX, POUSY set		To be used by single, two- and three-engine aircraft.
ROUSY8C		Cross HUL at FL60 (FL70 when QNH is below 977 HPA) or above.	May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16, Chapter 3/FAR part 36 Stage 3</i> and whose performances permit to adhere to the SID.
			CDR 1 - H24
			TEMPO CLSD on ATC instructions due to MIL requirements (alternative route: SOPOK9C - SOPOK - RITAX - ROUSY).
			RITAX - ROUSY is a RNAV5 segment.
		RNAV1 Or Only AVB for DEP R ATC climb To be use aircraft.	RNAV1 Overlay of ROUSY8C
			Only AVBL from 0500 to 2159 (0400 to 2059) for DEP RWY 25R and H24 for DEP RWY 25L.
			ATC climb requirements: see § 3.2.2 below.
	RNAV1:		To be used by single, two- and three-engine aircraft.
ROUSY 2G	[A1700+; L] -> BR101 - HUL [A6000+] - BR102 - REMBA - RITAX - ROUSY	Cross HUL at FL60 (FL70 when QNH is below 977 HPA) or above.	May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16, Chapter 3/FAR part 36 Stage 3</i> and whose performances permit to adhere to the SID.
			CDR 1 - H24
			TEMPO CLSD on ATC instructions due to MIL requirements (alternative route: SOPOK 2G - SOPOK - RITAX - ROUSY).

RWY 25R ONLY

Designator	Route		Remarks
Designator	Lateral	Vertical	Kentarks
LNO6C	Climb straight ahead. At 1700FT QNH LT to intercept R-286 LNO INBD to LNO.	Cross R-044 HUL at FL60 (FL70 when QNH is below 977HPA) or above.	AVBL from 0500 to 2159 (0400 to 2059). AVBL for TFC requesting a cruising or initial flight level below FL 195. To be used by single, two- and three-engine aircraft. May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16</i> , <i>Chapter 3/FAR part 36 Stage 3</i> and whose performances permit to adhere to the SID.
LNO 2G	RNAV1 : [A1700+; L] -> BR101 - BR103[A6000+] - LNO	Cross BR103 at FL60 (FL70 when QNH is below 977HPA) or above.	RNAV1 Overlay of LNO6C AVBL from 0500 to 2159 (0400 to 2059). AVBL for TFC requesting a cruising or initial flight level below FL195. To be used by single, two- and three-engine aircraft. May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16,</i> <i>Chapter 3/FAR part 36 Stage 3</i> and whose performances permit to adhere to the SID.
LNO6Z	At 700 FT QNH RT HDG 290 to intercept R-043 CIV. Do not cross R- 276 BUB. At 22.0 DME CIV LT to intercept R-155 AFI. At 9.0 DME AFI LT to intercept R- 268 HUL INBD. At HUL intercept R-282 LNO INBD to LNO.	Cross HUL at FL60 (FL70 when QNH is below 977HPA) or above.	AVBL from 2200 to 0459 (2100 to 0359). ATC climb requirements: see <u>§ 3.2.2</u> below. For TFC requesting a cruising or initial FL below FL 195.
LNO 2M	RNAV1 : [A700+; R] - BR421[T291] - BR422 - BR413 - HUL[A6000+] - LNO	Cross HUL at FL60 (FL70 when QNH is below 977HPA) or above.	RNAV1 Overlay of LNO6Z AVBL from 2200 to 0459 (2100 to 0359). ATC climb requirements: see § <u>3.2.2</u> below. For TFC requesting a cruising or initial FL below FL 195.
SPI6C	Climb straight ahead. At 1700FT QNH LT to intercept R-286 LNO INBD, intercept R-294 SPI INBD to SPI.	Cross R-044 HUL at FL60 (FL70 when QNH is below 977HPA) or above.	AVBL from 0500 to 2159 (0400 to 2059). To be used by single, two- and three-engine aircraft. May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16</i> , <i>Chapter 3/FAR part 36 Stage 3</i> and whose performances permit to adhere to the SID.
SPI 2G	RNAV1 : [A1700+; L] - BR103[T107; A6000+] - BR105 - SPI	Cross BR103 at FL60 (FL70 when QNH is below 977HPA) or above.	RNAV1 Overlay of SPI6C AVBL from 0500 to 2159 (0400 to 2059). To be used by single, two- and three-engine aircraft. May be used by four-engine aircraft noise certificated according to <i>ICAO Annex 16</i> , <i>Chapter 3/FAR part 36 Stage 3</i> and whose performances permit to adhere to the SID.
SPI7Z	At 700FT QNH RT HDG 290 to intercept R-043 CIV. Do not cross R- 276 BUB. At 22.0 DME CIV LT to intercept R-155 AFI. At 9.0 DME AFI LT to intercept R-268 HUL INBD. At HUL R-289 SPI INBD to SPI.	Cross HUL at FL60 (FL70 when QNH is below 977HPA) or above.	AVBL from 2200 to 0459 (2100 to 0359). ATC climb requirements: see <u>§ 3.2.2</u> below.
SPI 2M	RNAV1 : [A700+; R] - BR421[T291] - BR422 - BR413 - HUL[A6000+] - SPI	Cross HUL at FL60 (FL70 when QNH is below 977HPA) or above.	RNAV1 Overlay of SPI7Z AVBL from 2200 to 0459 (2100 to 0359). ATC climb requirements: see § 3.2.2 below.
SOPOK7Z	At 700FT QNH RT HDG 290 to intercept R-043 CIV. Do not cross R- 276 BUB. At 22.0 DME CIV LT to intercept R-155 AFI. At 9.0 DME AFI LT to intercept R-268 HUL INBD to intercept R-286 SPI INBD to BULUX, SOPOK next.	Cross R-224 HUL at FL60 (FL70 when QNH is below 977 HPA) or above.	AVBL from 2200 to 0459 (2100 to 0359). ATC climb requirements: see <u>§ 3.2.2</u> below.

3.2.2 Climb Requirements

All traffic shall initially climb to FL60, unless instructed otherwise by ATC. Brussels APP or Brussels ACC will allocate a higher level as soon as possible.

Following additional requirements apply:

- Traffic proceeding via SOPOK ETENO LIRSU and planned above FL245 shall cross BULUX at FL170 MNM and ETENO at FL250 MNM;
- Traffic proceeding via REMBA RITAX shall cross REMBA at FL100 MNM;
- Traffic proceeding via RITAX ROUSY or RITAX PITES and planned above FL245 shall cross RITAX or abeam at FL250 MNM;
- Traffic proceeding via CIV MEDIL and planned above FL265 shall cross MEDIL at FL210 MNM.

Aircraft unable to meet these requirements shall advise ATC when requesting start-up clearance, allowing for appropriate coordination to be made with adjacent ATS units in due time.

4 LOW VISIBILITY PROCEDURES

4.1 Facilities and Equipment Available

4.1.1 Runways

RWY 25L and 25R are equipped with ILS and are approved for CAT III operations with a minimum RVR of 50 M.

The runway exits are equipped with alternating green and yellow centre line lights within the ILS sensitive areas. Landing aircraft should leave this area as soon as possible.

In order to provide adequate protection of the ILS system, no vehicle or aircraft shall infringe the ILS sensitive areas when an arriving aircraft is within 2 NM from touchdown and has not completed its landing run.

Departing aircraft are required to use the following CAT II/III holding points at RWY 25R: B1 (backtrack not allowed), W41/W42 or A1. Intersection take-offs are not allowed except when entering RWY 25R via B1 or A1.

Guided take-off is not available.

4.1.2 Taxiways

Taxi is restricted to the taxiways equipped with centre line lights. Standard routes are established for departing and arriving aircraft (see chart <u>AD 2.EBBR-GMC.04</u>). After receiving taxi clearance, aircraft shall proceed only when a green centre line path is illuminated, except on TWY N6-A1.

When RVR at TDZ falls below 400M, a follow-me car is available on stand-by to assist pilots during taxi upon request.

ATC may use ground surveillance information to assist in monitoring aircraft and vehicles on the manoeuvring area. Any ground surveillance derived information is however to be considered as advice only.

4.1.3 Communications

Pilots will be informed by ATIS or ATC when LVP are in progress. The ATIS message will contain the phrase "LOW VISIBILITY PROCEDURES IN PROGRESS" and will also provide details of any unavailability of equipment relevant to LVP.

Pilots will be informed by ATC when LVP are terminated.

4.2 Criteria for Initiation and Termination of LVP

The preparation phase will start when visibility falls below 1500M and/or ceiling is at or below 300FT, and CAT II/III operations are expected. The operations phase will start when RVR falls below 800M or the ceiling is below 200FT.

LVP will be terminated when RVR is greater than 800M and ceiling is higher than 200FT, and a continuing improvement in these conditions is expected.

4.3 Other Information

When LVP are in operation, arriving aircraft will be vectored to intercept the ILS at least 10NM from touchdown. ATC will provide suitable spacing between arrivals to achieve sufficient protection of the ILS sensitive area (see $\S 4.1.1$ above). This spacing will be in the order of 8NM in case of CAT II operations and 10NM during CAT III operations.

The traffic manager will determine the applicable traffic acceptance rate according to the circumstances.

CAT II and CAT III approach practice during normal operations is allowed, but pilots should be aware that due to high traffic intensity, protection of the ILS sensitive area cannot be guaranteed and fluctuations in the ILS signal may occur.

5 VFR FLIGHTS

5.1 General

Pilots flying to/from EBBR or crossing Brussels CTR or TMA shall adhere strictly to all published procedures and ATC instructions. Non-adherence can cause unacceptable supplementary workload for ATC and may result in delays for the flights concerned. In any case, IFR traffic will have priority over VFR traffic.

VFR traffic (state aircraft and helicopter flights excluded) shall not enter Brussels CTR or TMA during following periods:

- from MON to FRI: 0700-0900 (0600-0800), 1200-1300 (1100-1200) and 1600-1900 (1500-1800);
- on SAT: 0700-0800 (0600-0700);
- on SUN: 1600-1900 (1500-1800).

Local VFR flights at night within the aerodrome traffic circuit are prohibited.

The published routes are compulsory. All routes are allocated at ATC discretion according to the traffic situation. Pilots unable to comply shall contact ATC immediately to request an alternative route.

To enhance the see-and-avoid concept, VFR flights operating in Brussels CTR or TMA are advised to switch on their navigation, landing and anti-collision lights, and they shall keep a sharp look-out for other aircraft.

In order to improve radar detection, pilots flying transponder equipped aircraft shall set code 7000 in mode A/C. Unless another code has been previously allocated, Brussels TWR will allocate a code from series 6301-6313.

5.2 Visual Reporting Points

VFR traffic shall only use following reporting points:

Abbreviation	Name	Associated landmark	Position
AM	Abeam Mechelen	east of Mechelen, lake Nekker	510117N 0043023E
AT	Atomium	monument	505342N 0042029E
BE	Bertem	radar station	505226N 0043659E

5.3 Inbound Traffic

5.3.1 Communications

Pilots intending to enter Brussels CTR shall contact Brussels TWR on FREQ 120.780 (8.33 KHZ CH) (entry via AT, GB or ME) or 118.605 (8.33 KHZ CH) (entry via HO, LO or WA).

Pilots entering Brussels TMA shall contact Brussels Departure (entry between 2000FT AMSL and FL60) or Brussels ACC (entry above FL60).

All VFR flights with destination EBBR shall report their position and obtain an ATC clearance before entering the Brussels CTA, TMA or CTR. When practicable, the request shall be made at least 5MIN prior to entry.

5.3.2 Routes

RWY 25L/R OR RWY 07L/R IN USE

Arrivals from the North	Join Brussels CTR via ME and proceed to PU. Traffic shall remain RIGHT of motorway E19 and enter the aerodrome traffic circuit according to ATC instructions.
Arrivals from the South	Join Brussels CTR via WA or LO and proceed to ZB, NO next. Traffic shall remain RIGHT of motorways E411/R0, and enter the aerodrome traffic circuit according to ATC instructions.

RWY 01 (ARR) AND 07L/R (DEP) OR RWY 01/19 IN USE

Arrivals from the West	Join Brussels CTR via TE and proceed to GB, AT and CA next. Traffic shall remain RIGHT of motorway E40 and enter the aerodrome traffic circuit according to ATC instructions.
Arrivals from the East	Join Brussels CTR via HO and proceed to BE, NO next. Traffic shall remain RIGHT of motorway E40, and enter the aerodrome traffic circuit according to ATC instructions.

Crossing traffic shall follow the routes indicated above and proceed in accordance with ATC instructions.

Crossing traffic with destination EBGB will not be allowed to route directly to EBGB, but will be instructed to vacate Brussels CTR via the relevant outbound routes indicated below.

Aircraft crossing Brussels CTR east of EBBR may be instructed by ATC to hold over reporting point SH (northbound traffic) or KH (southbound traffic), awaiting clearance to cross the final approach path of RWY 25L/R.

5.4 Outbound Traffic

5.4.1 Communications

Pilots departing from EBBR shall request start-up clearance from Brussels Delivery. The clearance will be issued depending on traffic density.

Together with start-up clearance, pilots will receive instructions regarding the transponder setting, the outbound routes to be expected and the ATS unit(s) to be contacted with the associated frequency.

Departing traffic with destination EBGB will not be allowed to route directly to EBGB, but will be instructed to vacate Brussels CTR via the relevant outbound routes indicated below.

5.4.2 Routes

RWY 19 AND 25L/R IN USE

Departures to the North	After take-off, right turn to PU and proceed via AM. Traffic shall remain RIGHT of motorway E19 and leave Brussels CTR according to ATC instructions.
Departures to the South	After take-off, left turn to NO and proceed via ZB to LO or WA. Traffic shall remain RIGHT of motorways R0/E411 and leave Brussels CTR according to ATC instructions.

RWY 01 AND 07L/R IN USE

Departures to the West	After take-off, left turn to CA and proceed via AT, GB and TE. Traffic shall remain RIGHT of motorway E40 and leave Brussels CTR according to ATC instructions.
Departures to the East	After take-off, right turn to NO or abeam and proceed via BE and HO. Traffic shall remain RIGHT of motorway E40 and leave Brussels CTR according to ATC instructions.

6 HELICOPTER FLIGHTS

All helicopters to and from EBBR are subject to PPR. Prior permission must be obtained before the departure of the helicopter. In flight requests are not allowed. PPR requests shall be addressed to Brussels Airport Company Airside Inspection:

TEL: + 32 (0) 2 753 69 00

FAX: + 32 (0) 2 753 69 09

Email: inspect@brusselsairport.be

Upon requesting permission to land at or take off from EBBR, notwithstanding any other required information, the pilot will clearly indicate:

- the flight rules under which the flight will be performed: IFR or VFR;
- · the MOPSC;
- the time of the day on which the flight will be performed (day or night flight);

• the performance class under which the helicopter will be operated.

Restrictions of use applying to the FATO:

- The FATO is limited to:
 - · helicopters able to climb according their associated performance class and obstacle surface clearance;
 - VFR traffic only;
 - · day operations only (HJ);
 - performance class 2 (slope category "C") and performance class 3 (slope category "B") operations only;
 - helicopters that have an MOPSC ≤ 19;
- All helicopters shall take off or land on the designated runway in use in the following conditions:
 - night operations (HN);
 - operating under IFR;
 - operating under performance class 1 (slope category "A");
 - if the MOPSC > 19.

7 RADIO COMMUNICATION FAILURE

If an aircraft does not succeed in landing within the 30 MIN normally allowed for approach and landing, it shall leave Brussels CTR and TMA on R-289 BUB at 2200 FT QNH or below, and land at the first suitable aerodrome where the weather conditions allow a visual approach and landing.

See also ENR 1.1, § 1.10.5.

EBBR AD 2.23 Additional Information

1 ATIS

ATIS messages serving inbound and outbound traffic are broadcast H24 (see EBBR AD 2.18).

AMDT 007/2021

The messages contain following elements in the order as listed:

Item	ATIS	Start of expression
Aerodrome name	EBBR NAT	Brussels National
Alphabetical designator	ARR or DEP (A till Z)	Arrival or Departure (alfa - zulu)
Time of observation	HHMM	
Type of approach to be expected (ARR only)	TYPE APCH	Expecting vectoring
Runway in use for ARR (resp DEP)	ARR RWY(s)	Runway (RWY) for arrivals
RSCD time		Runway surface condition at
RSCD for complete RWY or per third part of RWY including depth	TDZUP TOmm MIDUP TOmm ENDUPmm	touchdown zoneup tomm middleup tomm endup tomm
RWYCC	RWYCC	Runway condition code
Runway in use for DEP (resp ARR)	DEP RWY(s)	Runway (RWY) for departures
Transition level	TRL	Transition level
Operational status	OPS STS	
Surface wind, direction and speed (including significant variations)	WIND	Wind
Visibility	VIS	CAVOK or visibility
RVR	RVR (RWY) TDZ / M, MID / M, END / M	RVR runwaymetres,metres,metres
Present weather	WX	weather
Cloud base or vertical visibility	CLD VV / FT	Cloudor vertical visibility
Air temperature	Т	Temperature
Dewpoint temperature	DP	Dewpoint
Altimeter settings	QNH	QNH
Recent weather	REWX	Recent
Supplementary meteorological phenomena	SIGWX	Wind shear, cumulonimbus in climb out, severe icing,
Landing forecast TREND	TREND	NOSIG, trend BCMGor trend TEMPO
CONFIRM ATIS ARR (resp DEP)	CFM(A till Z)	Confirm ARR (DEP)(alfa - zulu) on first contact

When rapidly changing weather conditions make it inadvisable to include a weather report in the ATIS broadcast, the weather data are omitted and replaced by the phrase "MET REPORT OMITTED DUE TO RAPID CHANGES". The omitted data can be requested from ATC.

Pilots are requested to listen to the ATIS broadcast prior to the first contact with ATS. When establishing communication with the relevant ATS unit, the pilot shall acknowledge receipt of ATIS message with the phrase "INFORMATION ... [alphabetical designator] RECEIVED". ATS will confirm the validity of the received alphabetical designator. If the designator has changed meanwhile, only the actually valid designator will be given.

2 LIGHTNING PROCEDURE

Lightning procedure in progress will be announced by ATIS.

When lightning procedure is activated, some handling activities may be temporarily suspended.
